

Be Our Next Soil Success Story!

By Paul Schneider Jr.,
AG-USA

We have many pages of great testimonials from farmers who have used MycorrPlus 1 and 2 years. What is amazing is what 3rd and 4th year customers are saying.

Mark - 30 Bushels More in NE

"I have used the MycorrPlus for four years and have noticed soil and crop improvement every year."

"This year we had hard red winter wheat that yielded 50 bushel dry land, good test weights, when typically 35 is our average yield. Organic soybeans that normally yield 20 bushel yielded 50 this year."

"We also observed the Canada Thistles patches are shrinking. Great product."

Joseph - Enviaible Grass in GA

"I am very impressed with MycorrPlus. I had a Canadian Thistle problem but now things are improving with less and less of it each year. My organic matter is increasing. It used to be around 4, but now it is around 6. My pH is now in the mid 6's."

"My neighbor says my cattle are looking healthy. My neighbor's pasture looks like it has more weeds compared to mine - mine looks like good grass. I am seeing more earthworms."

Tripp - Jaw-dropping Annuals in GA

"After three years of application we are really starting to see some results from MycorrPlus. Our pH numbers are maintaining 6.4 to 6.8 levels. The real

An Extra Foot of Beautiful Topsoil Created out of Georgia Red Clay

results I'm seeing is our clover is going nuts now, where we have had trouble growing it in the past. Our winter annuals drilled into the pasture have never looked so good."

Mike - Clay to Rich Topsoil in GA

In 2015 Mike sprayed 2 quarts per acre on a test area of his pasture. In 2019 I went to his farm and examined the results of this single application.

Where he didn't spray I hit red clay at 1 foot and digging became difficult. Where he applied MycorrPlus I hit red clay at 2 feet and it was very easy to dig down to that point (see picture).

What caused this? Using carbon sequestration, the grass had produced enough sugars to transform two feet of red Georgia clay into dark, rich topsoil.

Will - 100+ Bales of Hay in MO

"I put MycorrPlus out in the fall of 2015 and in the spring of 2016. I went from 150 bales to 274 bales per acre on 5 acres. The coats of the horses really shone after eating the MycorrPlus grass."

RESULTS FROM THIS YEAR

David - Happy Tomato Grower in NC

David is 73 and has been growing tomatoes all his life. He said that his wife cans them and he eats 2 quarts a week! He used MycorrPlus this year, and has lots of blooms, tomatoes and plant growth.

"I have tinkered with tomatoes all my life and am very surprised by the results. I've never seek nothin' like this!"

Aaron - Too Much Hay in MO

In February Aaron sprayed two quarts/acre on his hay ground (fescue, orchard grass, 3 clovers, 2 taller grasses) and it has just about doubled his hay production. Aaron says his problem now is where to store it all. His hay is testing from 18.8% to 29.9% protein, which is pretty amazing.

Before spraying MycorrPlus in February the soil was highly compacted. When they took soil samples they had to dig with a shovel to get the probe to go in the 6 to 8 inches to get the samples. But 3 months later the probe now goes in easily. Aaron's grass is producing so well that there are almost no weeds - the grass is crowding them out.

Rick - Contented Sheep in IN

"I applied a quart per acre to my pasture. For the first time the grass stayed ahead of my 30 ewes. They didn't graze as long and were content and healthy. I put a quart on some of my corn and it yielded 5 bushel more than where I didn't put it."

Leo - More Hay Customers in NH

"I put on 42 oz. per acre the fall of 2018 and didn't use any other fertility. I saw a substantial improvement in the quality of my grass and hay, and some increase in yields. The number of my customers is increasing. Once their animals eat the hay they get from me they refuse to eat other hay they buy at their farm supply."

Conclusion

MycorrPlus helps to highly structure the soil. Mycorrhizal fungi practically eliminate the need for fertilizers, as they are "1,000 times more efficient at nutrient uptake than roots and hair roots." Use MycorrPlus each year and become our next soil success story!

Conquer Nature by
Cooperating with it

Mycorr Plus™

Reap the benefits of mycorrhizal fungi on your farm!

Reduces the need for LIME and other fertilizers

MycorrPlus is a liquid bio-stimulant that helps to remove compaction by highly structuring the soil. It creates an "aerobic net" in the soil that retains nutrients and moisture. It contains concentrated sea minerals, 70+ strains of aerobic bacteria, fish, kelp, humic acids and molasses. \$20 to \$40/acre.
